

Japan Virtual Client Computing

AN IDC CONTINUOUS INTELLIGENCE SERVICE

Virtual client computing (VCC) comprises desktop computing models that leverage a range of virtualization software and delivery models. Technology vendors and service providers have recognized the importance of this emerging market and its opportunities and have begun tracking the trends of this market closely. The merits and demerits of each technology and IT professional requirements are just two examples of some of the crucial subjects covered in this service. IDC's *Japan Virtual Client Computing* service provides PC vendors, software vendors, and IT solutions providers with the necessary information to help them make business-critical decisions in the VCC market. The relation of other virtualization technology with VCC and work style revolution case study are also analyzed in 2017.

Markets and Subjects Analyzed

- Thin-client vendor share, method, and OS by shipments
- Virtualization software market size and vendor share
- Virtual client solution market size by revenue
- VCC ratio and forecast by installed base
- Virtualization software forecast by license
- Virtual client solution forecast by revenue

Core Research

- Japan Virtual Client Computing Forecast and Share
- Japan Client Virtualization Trend Analysis
- Japan Virtual Client Computing Vendor Analysis
- Japan Client Virtualization ROI Analysis
- Buyer Case Study

In addition to the insight provided in this service, IDC may conduct research on specific topics or emerging market segments via research offerings that require additional IDC funding and client investment.
